

NETWORK TECHNOLOGIES INTERNATIONAL, INC.

TURNING DATA INTO INTELLIGENCE

CAPABILITIES STATEMENT

BUSINESS FOCUS

Network Technologies International, Inc. (NTI) transforms complex **global telecommunications data** into clear, actionable intelligence through our **integrated platform**.

We build dependable, high-performance **data models** and **software tools** that help organizations make faster, smarter decisions. Our integrated intelligence platform **simplifies how teams access, validate, visualize, and publish telecom data**, bringing clarity to telephone numbering plans, service providers, coverage areas, and network infrastructure assets.

We serve mission-critical needs across **government, finance, utilities, and technology** sectors, delivering seamless data workflows and real-time insights at scale. With more than **40 years of engineering innovation**, NTI is the technology partner organizations trust to understand the complexity of telecommunication networks and to empower users into confident action to meet their **intelligence needs**.

MISSION

We are a privately held corporation that specializes in data mining, database processing, geospatial analysis, software engineering, and network design and planning for telecommunication networks worldwide.

Our business is built on three core capabilities: comprehensive data models, advanced and customizable software tools, and deep understanding and historical knowledge about telecommunication networks.

VISION

Our vision is to be the primary provider and integrator of telephony reference data about global telecommunication networks and systems for our customers through advanced expertise in data management and software solutions.

We aim to be an industry leader in providing quality data and software for fast and reliable delivery.

Global Telecommunications Data

Validation + Verification Services

Visualization + Search Tools

Modeling + Simulation Software

Integrated Intelligence Platform

Geospatial Mapping Solutions

Data Automation + AI Models

Telecom Training + Advisory Services

NETWORK TECHNOLOGIES INTERNATIONAL, INC.

TURNING DATA INTO INTELLIGENCE

PRODUCT HIGHLIGHTS

GLOBAL TELECOMMUNICATIONS DATA

We provide the most reliable and comprehensive global telecommunications data, built on a foundation of rigorous quality processes and refined through decades of expertise. Our proven methods ensure the highest data integrity, supporting clients to make informed decisions with confidence. With our specialized industry acumen, NTI continues to set the standard in telecommunications data, offering unmatched quality and depth.

API SERVICES

Our API services provide high-confidence validation, normalization, and network intelligence powered by authoritative telecom datasets and decades of domain expertise. We deliver accurate, structured, and quality-assured data to support operational workflows, analytics, and critical decision-making. These capabilities enable organizations to improve data quality, strengthen analytical confidence, reduce operational risk, and gain deeper insight into the global telecom landscape.

GEOSPATIAL MAPPING SOLUTIONS

Our powerful geospatial mapping and visualization capabilities are purpose-built for the telecommunications industry. ATLAS, our geospatial mapping platform, transforms complex data into clear, actionable insights, enabling clients to assess infrastructure coverage, identify network gaps, and make informed, data-driven decisions. ATLAS supports high-precision planning and strategic analysis across operations of any scale.

DATA MODELING SOFTWARE

We deliver intelligent data management through ORION, our data modeling platform designed to store, manage, edit, and visualize telecommunications network data. ORION combines map-based editing with rigorous governance tools to ensure accuracy, consistency, and collaboration at every stage of the data lifecycle. With flexible workspaces and scalable design, ORION empowers teams to transform complex datasets into trusted, actionable intelligence.
